WhatsUp Event Log Management Suite

WhatsUp Event Log Management Suite at a glance

- **Awarded the US Army's Certificate of Networkiness (CoN): Cert #201004611** -- *Complete confidence that the WhatsUp Gold family meets strict security, sustainability and interoperability requirements*
- **Automate** the process of clearing, collecting, consolidating and storing log data for auditing and regulatory compliance -- *Saves time & reduces errors*
- **Detect** security threat or compliance violations in real-time -- *Rapidly block offenders and immediately follow response policies*
- **Simplify** analysis and reporting of your log data -- *IT, auditors, security & compliance officers can easily verify security policies and prove and document that compliance standards are being met*
- **Centralize** planned or ad-hoc forensics activities -- *Remotely access log data across any server or workstation to increase troubleshooting efficiency*
- **Cost-effective** -- *Purchase one or more modules or the entire suite*

Why Do Organizations Need Log Management Solutions?

Log files contain a wealth of information to reduce an organization's exposure to intruders, malware, damage, loss and legal liabilities. Log data needs to be collected, stored, analyzed and monitored to meet and report on regulatory compliance standards like Sarbanes Oxley, Basel II, HIPAA, GLB, FISMA, PCI DSS, NISPOM.

Yet, monitoring log files is impossible without the right tools since log files come from many different sources, in different formats, and in massive volumes.

Introducing WhatsUp Event Log Management Suite

A modular set of applications that can automatically collect store, alert, analyze and report on both Windows Event and Syslog files for real-time security event detection and response, and historical compliance assurance and forensics.

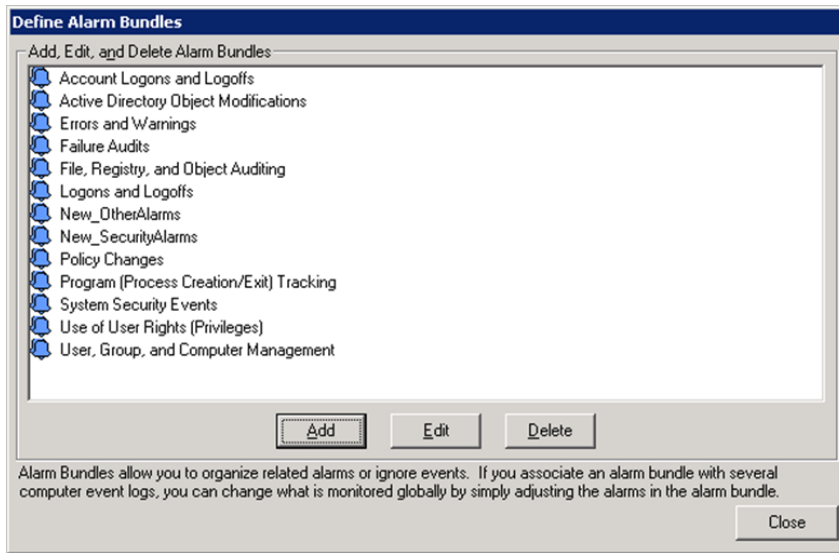

- ✔ Event Archiver: Automate log collection, clearing, and consolidation. Great for assisting in auditing & regulatory compliance.
- ✔ Event Alarm: Monitor log files and receive real-time notification on key events. Great for intrusion detection and monitoring for domain controller lock-outs, or file and folder access.
- ✔ Event Analyst: Analyze and report on log data and trends. Automatically distribute reports to management, security officers, auditors and other key stakeholders.
- ✔ Event Rover: Single console for in-depth forensics across all server and workstations to increase efficiency and save time

Now IT operations, compliance officer and security personnel can be confident that every single external or internal event, administrative or configuration change, or failure generated is captured and fully documented to gain:

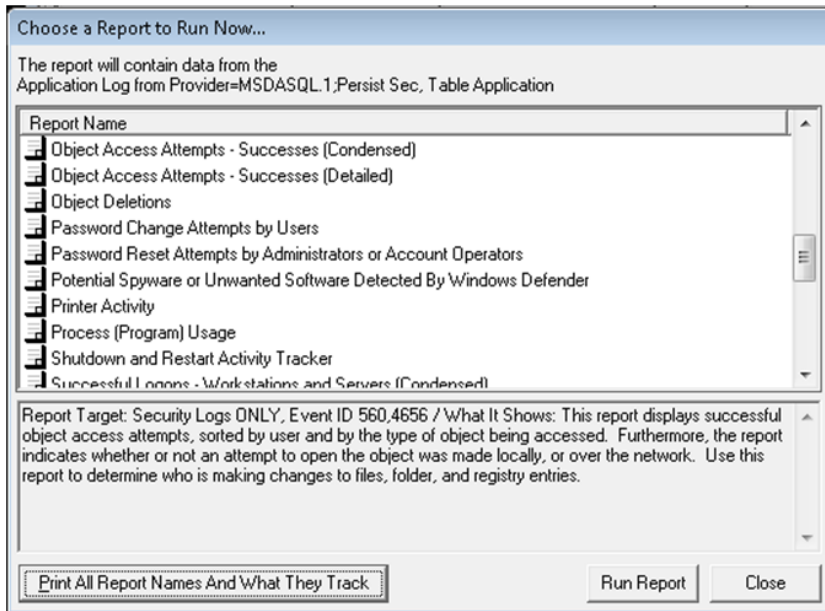

- Comprehensive visibility into internal and external security threats
- Reduced effort to locate and remediate events
- Achieving regulatory compliance at reduced cost
- Protection of internal IP and customer information
- Automated event and log management data collection processes
- Real-time data views, status and alerting

WhatsUp Event Log Management Suite at a glance

- **Remote & Agent-Based Collection** of Syslog and Windows Events -- *Adapts to your network security policies, simplifies configuration tasks and saves time*
- **Supports EVT and EVT-X format** -- *Easily open and correlate Windows events generated in a heterogeneous environment from one single console—2008, XP, Vista, Server 2003, NT 4.0*
- **Tiered “per server/workstation” price model which is easy to budget for** -- *No need to keep track of how much log data you generate, no hidden costs if your log files grow*
- Includes **patented Log Healer Technology** -- *Our solution handles and even repairs corrupted Microsoft EVT-X event logs*

Easily configure notification and escalation policies to ensure rapid team response

Out-of-the-box reports for IT, auditors, security and compliance officers
