

AVG for Linux

Grisoft's AVG software solutions provide reliable and complete protection to home and offices, small and medium businesses and enterprises of any size. Since its foundation in 1991, the company has achieved rapid growth. Corporate offices are located in Europe and the US, business partnerships are established in UK,

Germany, France, Brazil, Australia and New Zealand and distributors are present in many European countries. Grisoft resellers have successfully offered AVG products in more than 170 countries. Grisoft's primary focus is to deliver to the market the most comprehensive and proactive protection available. Version 7.5 represents an important

milestone in Grisoft's product development, as Grisoft moves from an antivirus provider to a provider of complete security solutions in the home, office and small to medium business segments. Full security solutions for the enterprise segment will follow soon.

AVG Anti-Virus for Linux/FreeBSD

Virus protection for Linux and FreeBSD workstations.

Maximum antivirus protection

Like all of the AVG solutions, AVG Anti-Virus for Linux/FreeBSD offers a unique combination of detection methods together with detection of Potentially Unwanted Programs to ensure that your computer receives the maximum antivirus protection. All incoming and outgoing e-mails and their attachments are thoroughly scanned for malicious code.

Easy to install and use

AVG Anti-Virus for Linux/FreeBSD is very easy to install and configure. All the key tasks are pre-defined to run automatically. The AVG installation includes graphical user interface for more user comfort.

Range of useful functions

The product uses standard Linux tools for scheduling, logging, etc. Powerful standalone command-line modules allow all possible on-demand testing and updating. Simple protocol for client connection checks files and directories. AVG allows the use of separate settings for incoming and outgoing e-mails. AVG can also certify outgoing e-mail as virus-free.

Automatic high-speed updates

AVG can be updated automatically as scheduled, or manually when required. Updating AVG is very simple and fast, AVG's small update files (typically, tens of kB) are distributed via high speed professional downloading services.

Effective, light on system resources

Having low demands on system consumption, the system is scalable to support required traffic load.

Supported platforms

Linux i386/FreeBSD
Red Hat/SUSE/Mandriva/Ubuntu/DEBIAN and other Linux i386 based distributions

Supported languages

Czech, Dutch, English, French, German, Hungarian, Italian, Polish, Portuguese, Serbian, Slovak, Spanish

Licensing

AVG Anti-Virus for Linux/FreeBSD requires one license per computer, and is available in 1, 2 and 5 license packs.

AVG File Server for Linux/FreeBSD

Virus protection for Linux and FreeBSD file servers.

Reliable file server protection

AVG File Server for Linux/FreeBSD constantly scans all files as they are opened, executed or copied/saved on the server. Your file storage server is checked to ensure that a connection with infected machines to corporate file servers does not spread viruses round the network.

Maximum antivirus protection

To ensure maximum antivirus protection, the AVG File Server for Linux/FreeBSD offers a unique combination of detection methods together with detection of Potentially Unwanted Programs. With AVG's award-winning antivirus technology you will be protected against computer viruses, Trojans, worms, and other forms of random, malicious programs.

Range of useful functions

The product uses standard Linux tools for scheduling, logging, etc. Powerful standalone command-line modules allow all possible on-demand updating and testing of files and directories.

Support for terminal servers and password protection

AVG File Server for Linux/FreeBSD directly supports terminal servers, the product also offers flexible password protection so you can select which settings you wish to protect from other users.

Supported platforms

Linux i386/FreeBSD
Red Hat/SUSE/Mandriva/Ubuntu/DEBIAN and other Linux i386 based distributions

Supported languages

Czech, Dutch*, English, French*, German, Hungarian*, Italian*, Polish*, Portuguese*, Serbian*, Slovak*, Spanish*
(* Language support is platform dependant.)

Licensing

The number of AVG File Server for Linux/FreeBSD depends on the number of workstations or connections to the servers in the network. License packages: up to 5, 10, 15, 20, 25, 30, 40, 50, 75 and 100. For more information about larger configurations contact us at sales@grisoft.com.

AVG Email Server for Linux/FreeBSD

Virus and spam protection for Linux and FreeBSD e-mail servers.

Maximum antivirus protection

Like all AVG solutions, AVG Email Server for Linux/FreeBSD offers a unique combination of detection methods together with detection of Potentially Unwanted Programs to ensure that your computer receives the maximum antivirus protection. All incoming and outgoing e-mails and their attachments are constantly scanned for malicious code.

Powerful, low on system resources

Having low demands on system consumption, the system is scalable to support required traffic load.

Range of useful functions

The product uses standard Linux tools for scheduling, logging, etc. Powerful standalone command-line modules allow all possible on-demand testing and updating. Simple protocol for client connection checks files and directories. AVG allows the use of separate settings for incoming and outgoing e-mails. AVG can also certify outgoing e-mail as virus-free.

File server protection included

The Email Server for Linux/FreeBSD also includes antivirus protection for your file servers even within heterogeneous networks. All files are scanned as they are opened, executed or copied/saved to the server, to ensure maximum antivirus protection.

Supported platforms

Linux i386/FreeBSD
Red Hat/SUSE/Mandriva/Ubuntu/DEBIAN and other Linux i386 based distributions
PostFix/QMail/Sendmail/Exim/Lotus Domino for Linux i386

Supported languages

Czech, Dutch*, English, French*, German, Hungarian*, Italian*, Polish*, Portuguese*, Serbian*, Slovak*, Spanish*
(* Language support is platform dependant.)

Licensing

The number of AVG Email Server for Linux/FreeBSD licenses required is determined by mailboxes, the number of mailboxes (up to 75). Over 75 mailboxes the number of licenses is determined by the number of servers. License packages: 10, 25, 50, 75 mailboxes and 1, 2, 3 and 5 servers. For more information about larger configurations contact us at sales@grisoft.com.

AVG FOR LINUX

Compared to other popular operating systems, Linux is generally considered to be less „at risk“ from threats such as viruses, trojans, worms and other malware. However this operating system is often used on mail servers processing emails going to the workstations with less secure operating system. Regarding reliability, stability, wide usage, and high performance – AVG for Linux ranks as one of the top solutions currently available – now with integrated antispam! Looking ahead towards possible increased threats to workstations and file servers, Grisoft’s focus is to minimize the potential risk of virus infection by protecting not only the e-mail but also the file servers and clients. With the possible damage caused by malicious programs each year running as high as billions of dollars, investment is necessary on both sides, (the technology developers and the customers).

A SOLUTION THAT’S JUST RIGHT FOR YOUR NEEDS

Like all of the AVG solutions, AVG for Linux editions offer a unique combination of detection methods to ensure that your computers receive the maximum protection. To prevent viruses from spreading via e-mail or file servers, AVG Linux scans incoming messages which, if infected, can be moved to Quarantine for further processing. The application can even be set to filter undesirable or suspicious files according to attributes such as the file extension type. AVG can also check all your outgoing mail and certify it as virus-free. The following features are available for Linux workstations:

- Command-line (on-demand) scanner
- Program/virus database update
- Scanning engine accessible from the daemon
- Resident Shield (On-Access Scanner) by means of the open-source Dazuko module

AVG Email Server for Linux/FreeBSD includes file server protection as standard. In order to meet the needs of our home users, we have developed a new addition to the AVG Anti-Virus for Linux\FreeBSD for desktops which includes professional update service and free 24/7 technical support too. Alongside existing support for the Windows platform is a new

„Free Edition“ for Linux with limited features and no support included. More information and download is available at free.grisoft.com.

AVG EMAIL SERVER FOR LINUX/ FREEBSD FEATURES

- Standard 2-year license policy with an optional 1-year license available
- Professional and rapid 24/7 technical support
- Antispam integrated
- Support for various e-mail and file servers
- Scalable to required traffic load
- Antivirus testing and updates on demand or according to a schedule defined by administrator
- Certification of e-mail as virus-free
- Email and attachment filtering
- Separate settings for incoming and outgoing mail
- Use of standard Linux tools for scheduling, logging, etc.
- Easy configuration
- Simple protocol for client connection to check files and directories
- Detection of Potentially Unwanted Programs

SUPPORTED LINUX VERSIONS

AVG for Linux Editions support most current Linux distributions provided that all system requirements are met. Specific .rpm installation packages are available for Red Hat, Fedora Core, Mandrake/ Mandriva, and SUSE, as well as .deb packages for Debian and Ubuntu. For other distributions, a .tar.gz installation package, including the interactive installation script, is available.
