Unified endpoint management

Manage all your devices from one single
dashboard.

Unified endpoint management with capabilities to manage your *multi-OS environment*

Your employees and your enterprise ops rely on a variety of devices—each as unique as their roles and responsibilities. Strengthening them means ensuring these devices are perfectly tuned to their and your needs while maintaining seamless control behind the scenes. With Scalefusion, you don't just manage endpoints; you create a connected, purpose-built device management ecosystem that makes employee productivity effortless, your enterprise operations seamless and IT management smarter.

Traditional UEM solutions were built for a simpler time, focused primarily on managing a handful of device types in a controlled, corporate environment. However, as work becomes more flexible and devices more diverse, those solutions start to show their limitations. Modern UEM, like Scalefusion, offers a more adaptive and integrated approach. It seamlessly manages a range of devices, from corporate laptops to BYOD smartphones, and ensures that security and compliance stay intact across every endpoint. With automation, data-driven insights, and a unified platform, modern UEM makes IT management more efficient, while aligning with the demands of dynamically evolving enterprise needs.

-  Zero Touch Enrollment
-  BYOD Containers
-  Application Management
-  Software Update Management
-  Security Management
-  Remote Troubleshooting

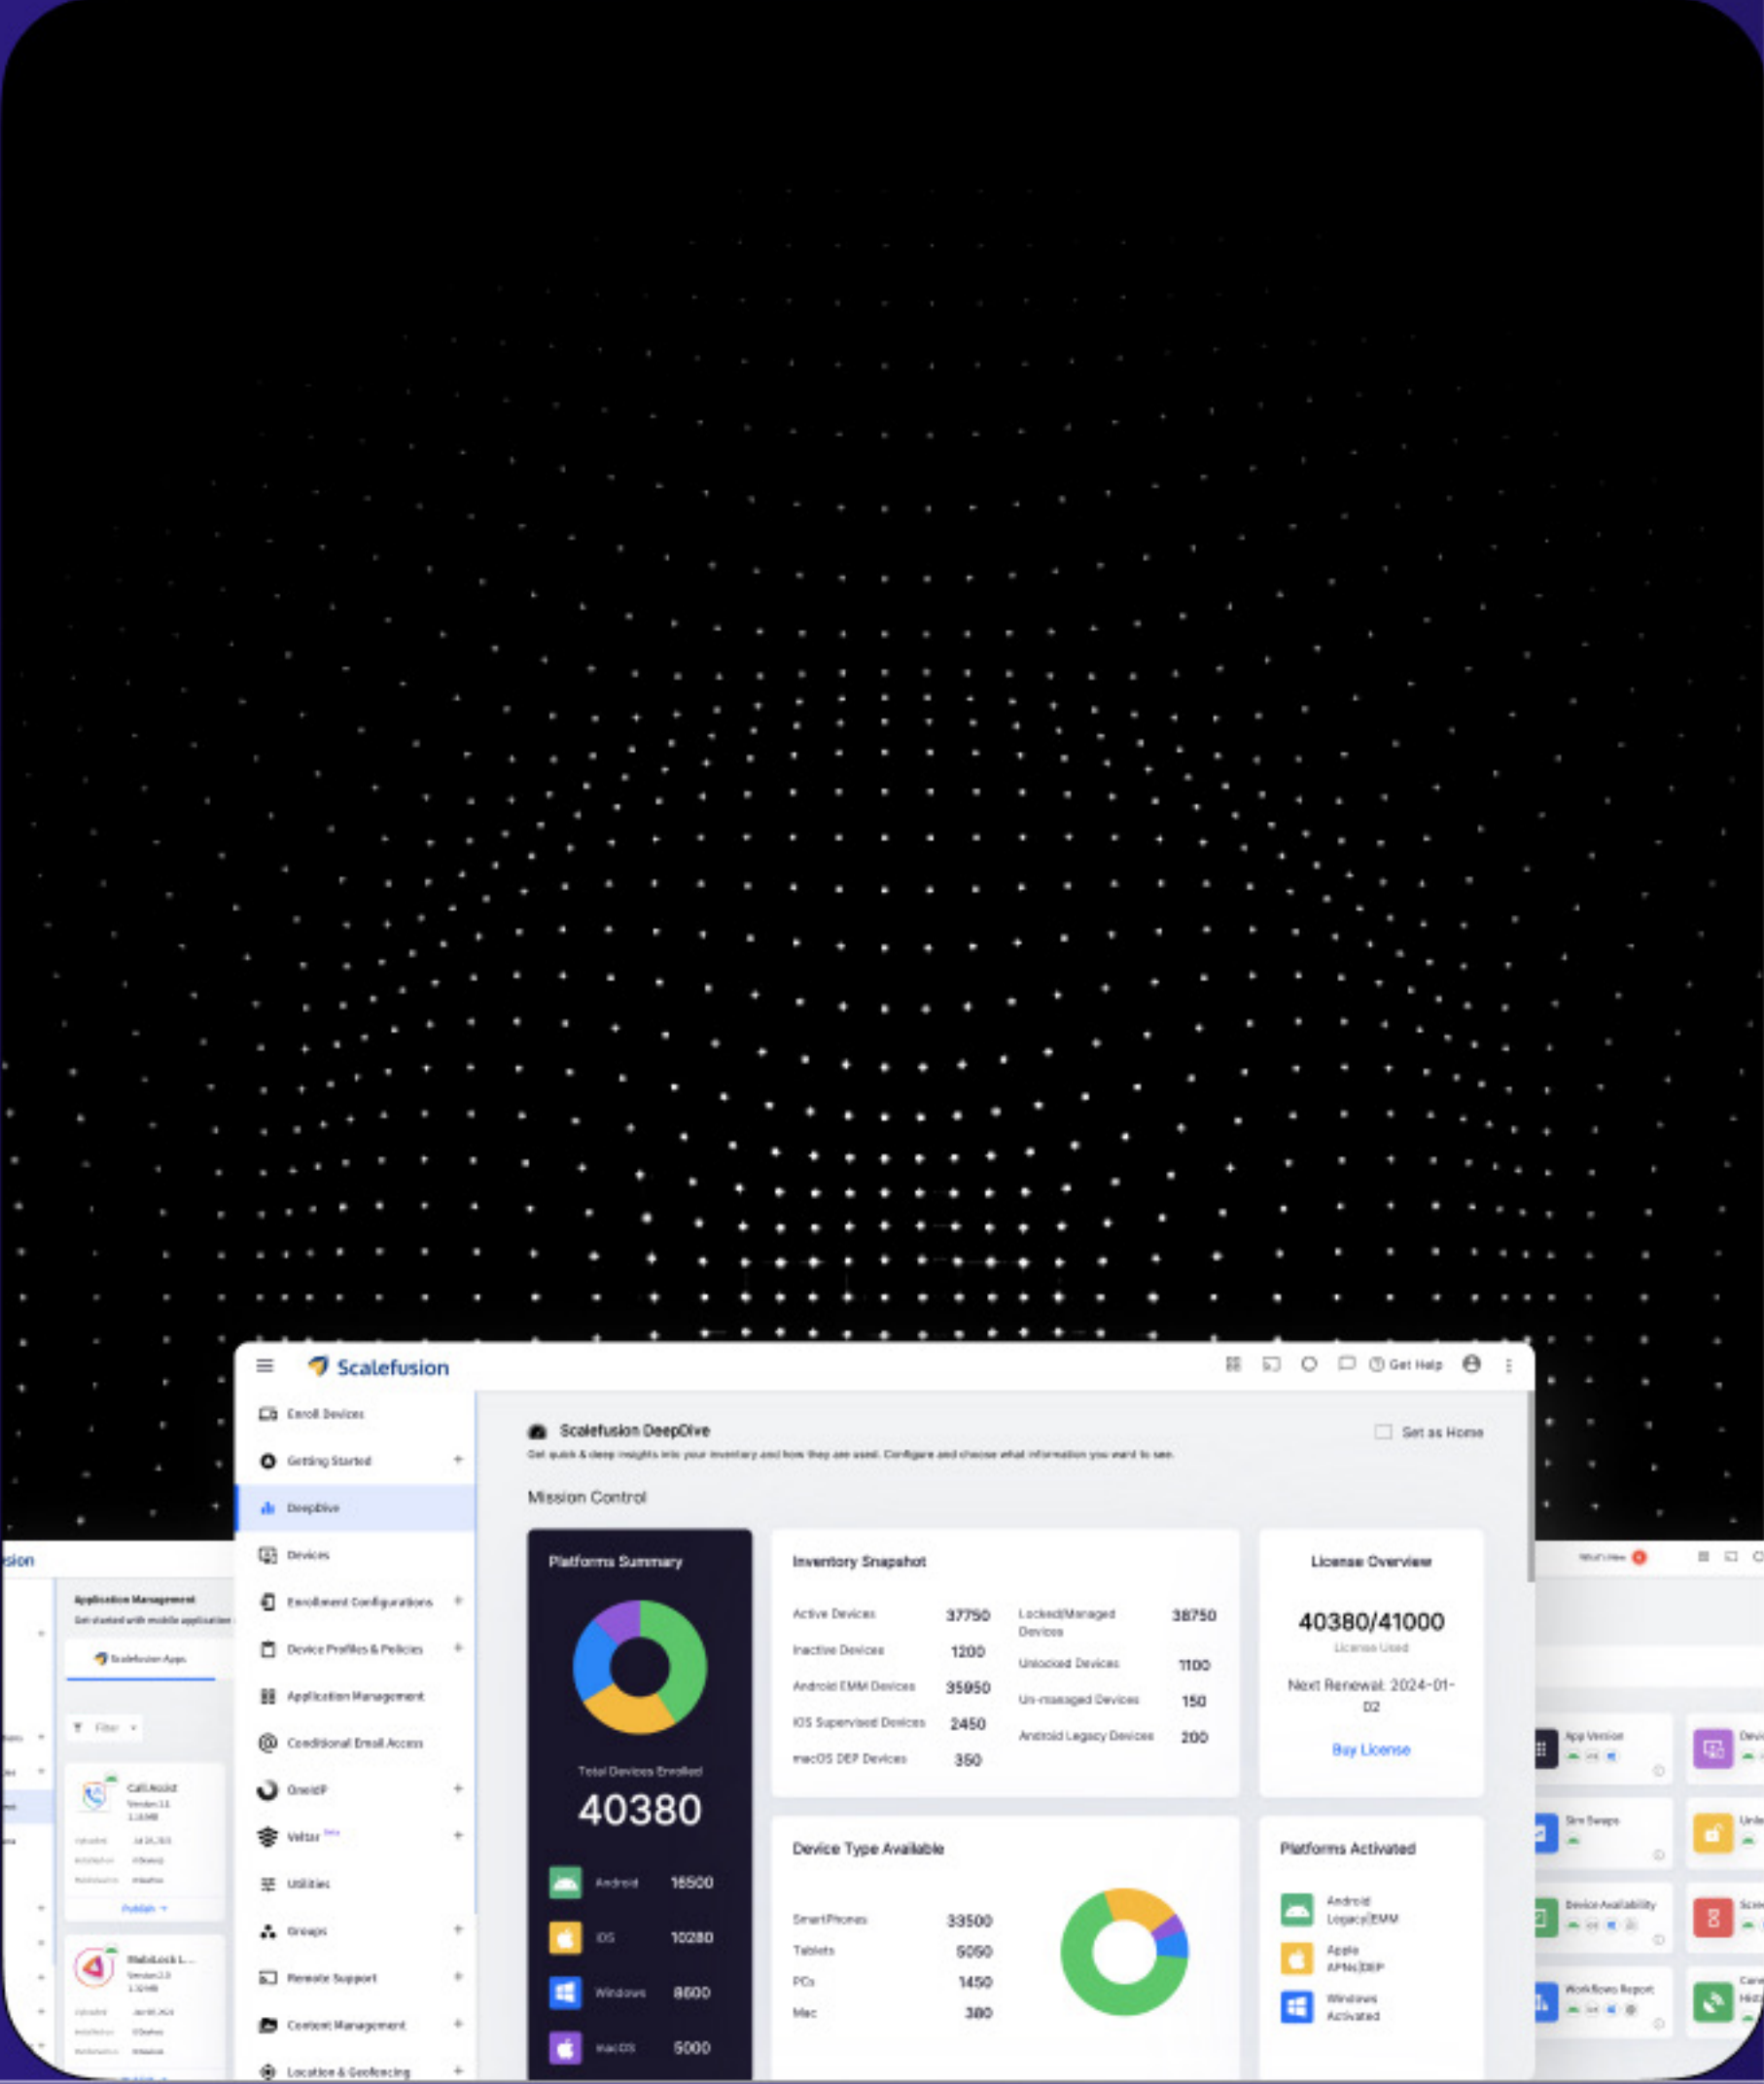

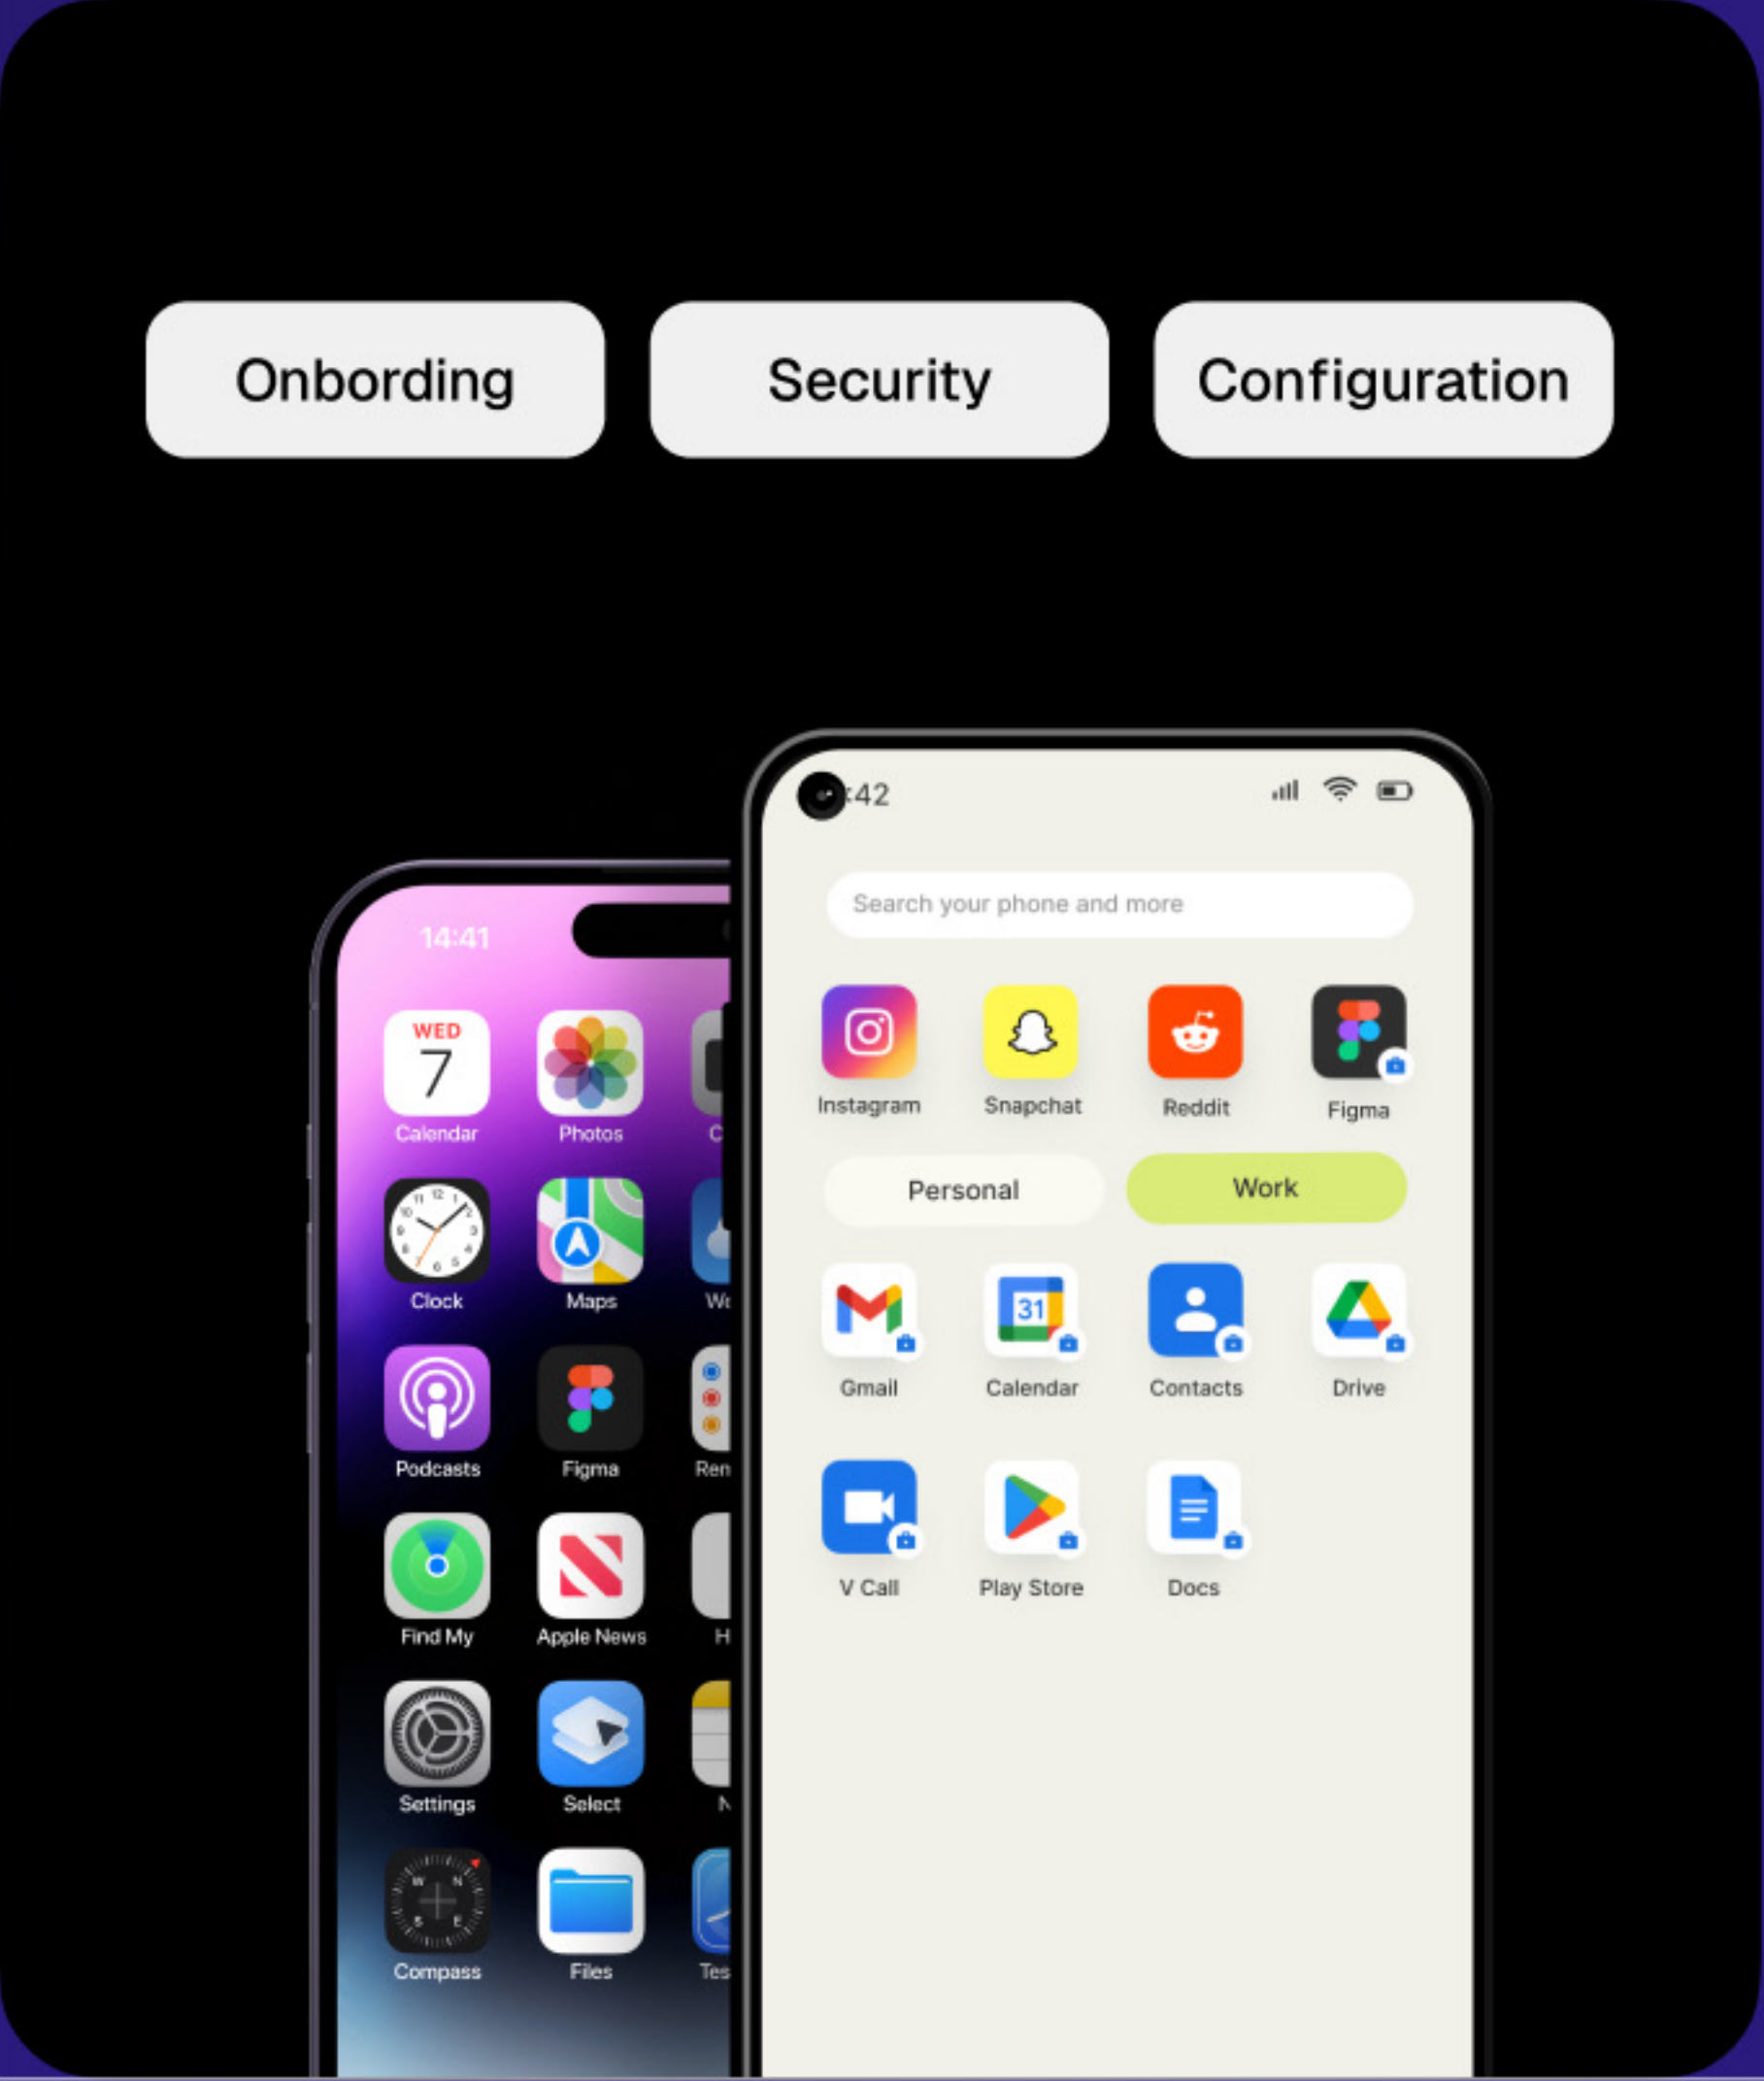

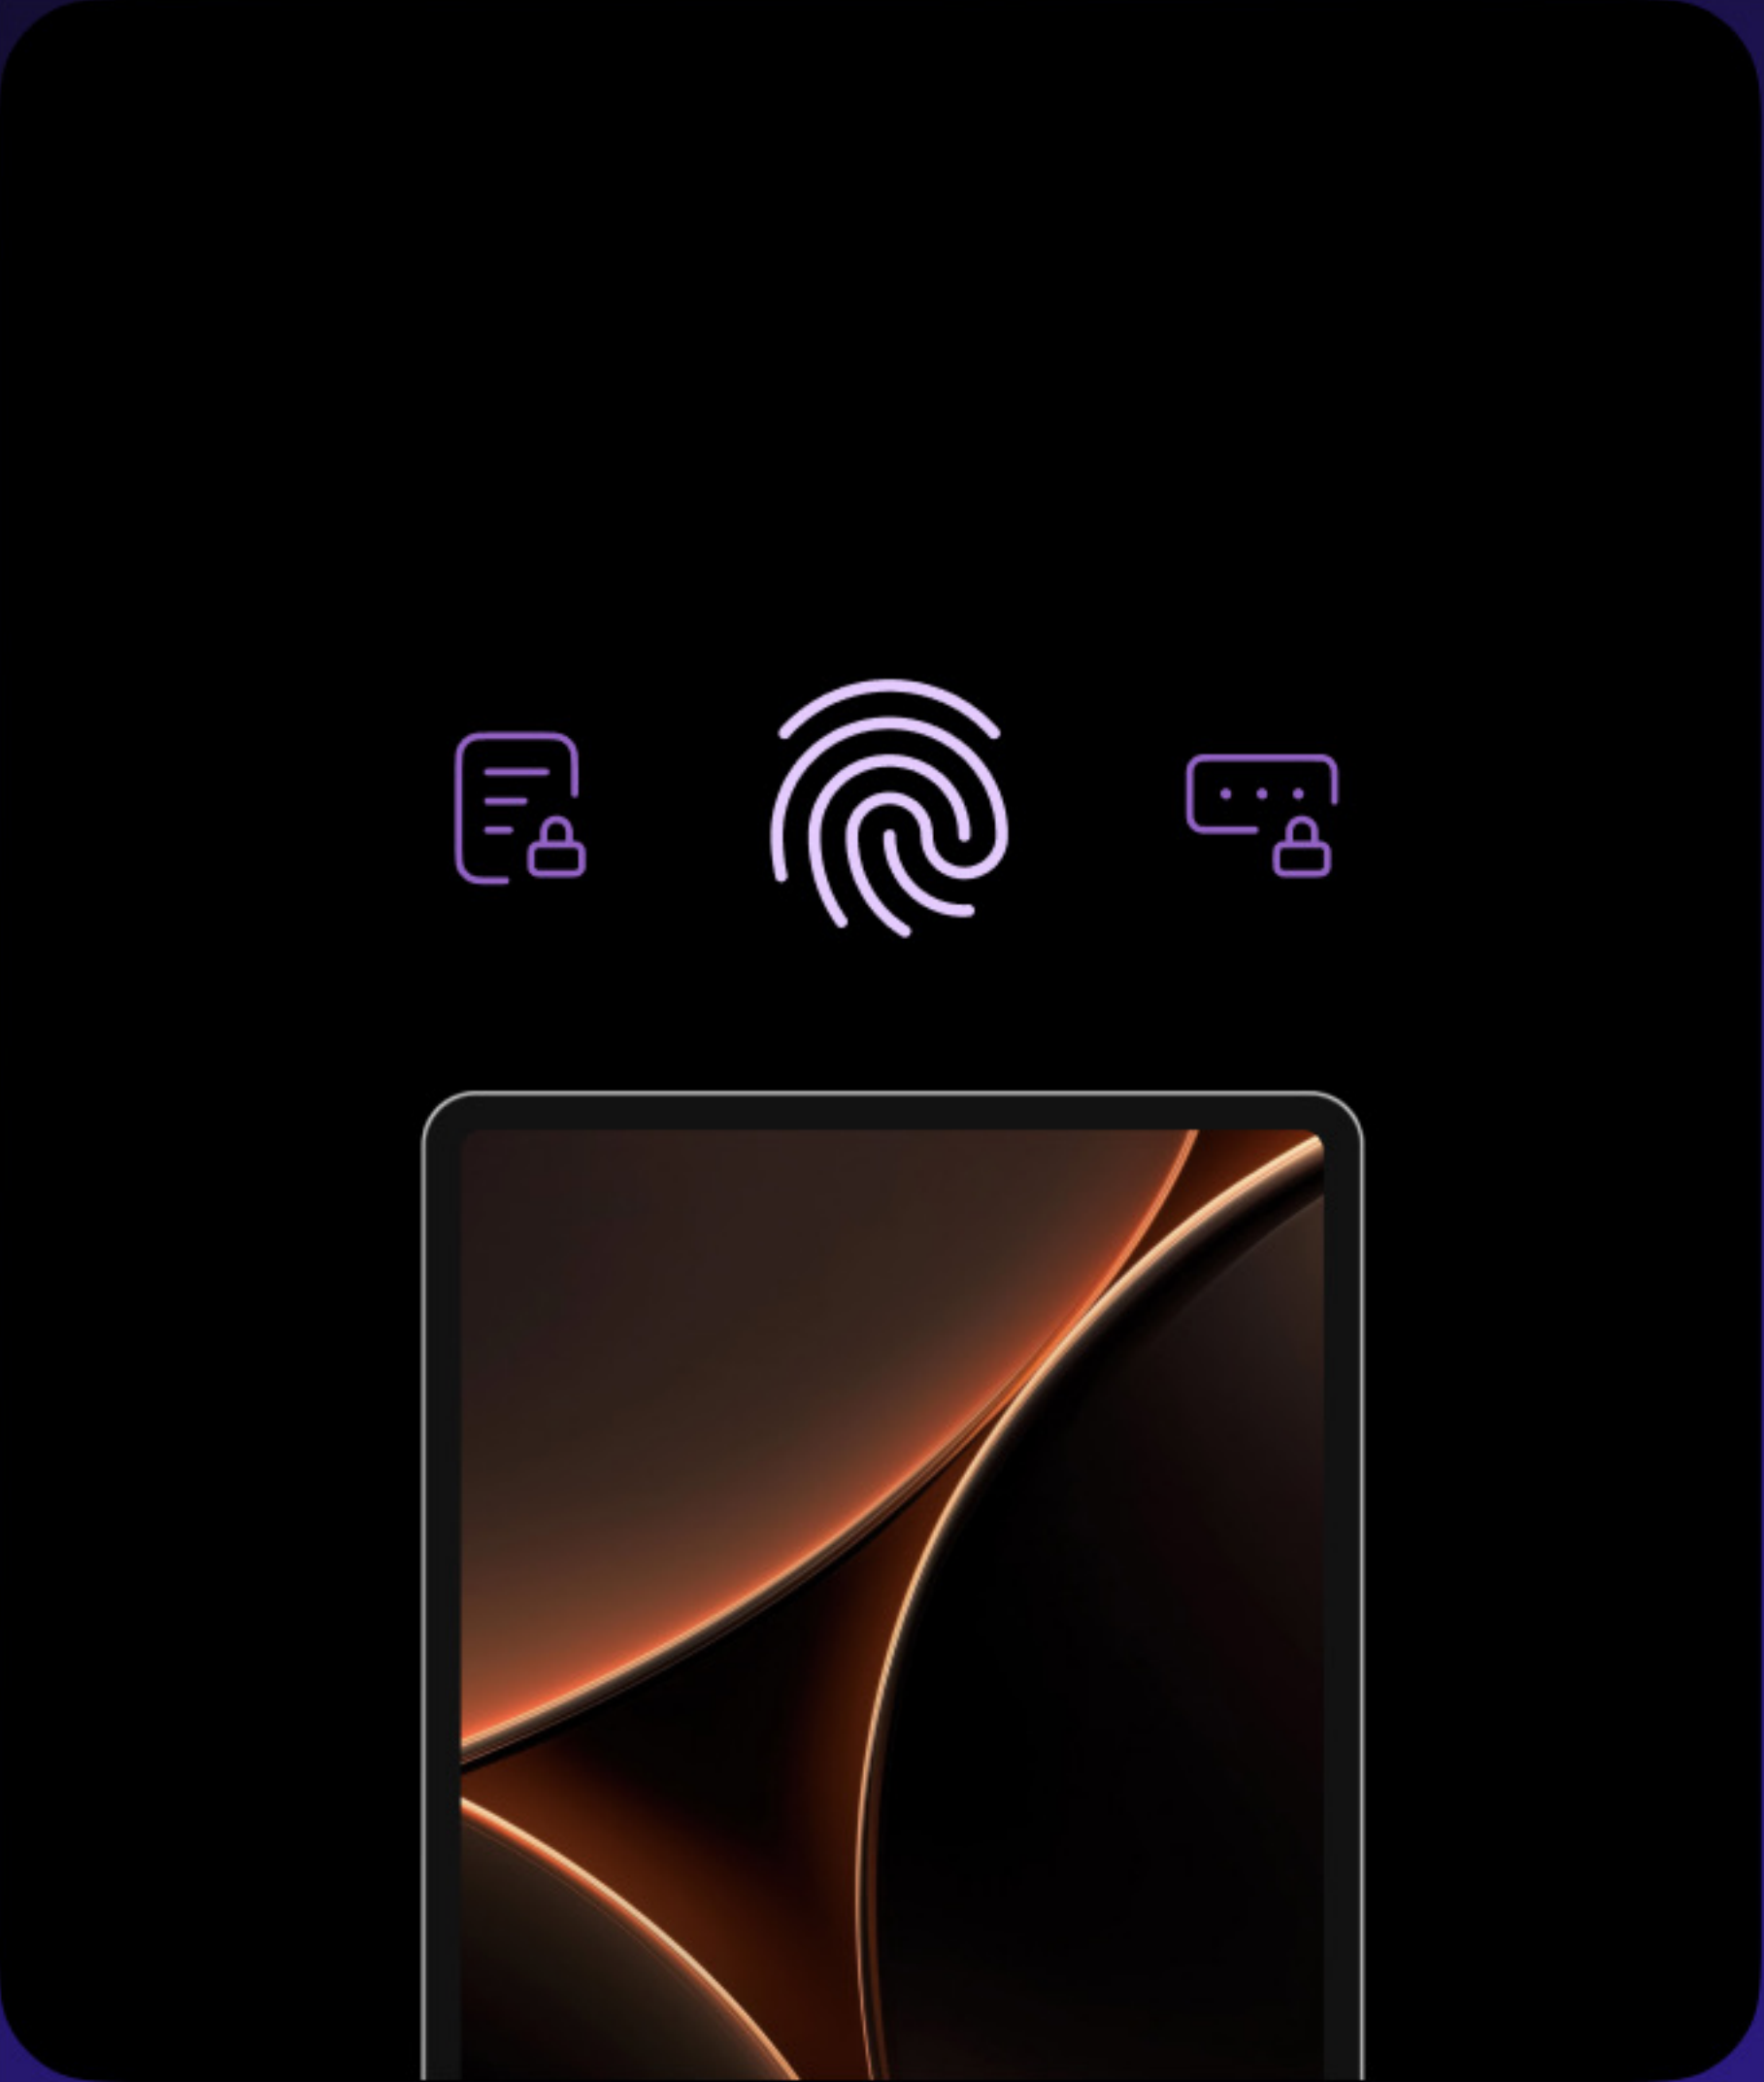

Effortlessly manage a wide range of devices—from corporate and BYOD mobile devices to laptops, desktops, and printers—with a powerful One Agent.

Simplify ITOps and reduce IT costs with a user- friendly interface that automates routine tasks, reduces manual efforts, and ensures consistent functionality across all devices.

Strengthen security by continuously monitoring, inventorying, and patching endpoints. Quickly locate or remotely wipe lost or stolen devices to minimize risks.

Streamline compliance by applying and enforcing security policies across devices in real time, ensuring adherence to corporate and regulatory standards.

Maintain seamless control over device configurations, updates, and app deployments, improving efficiency while keeping enterprise operations secure and productive.

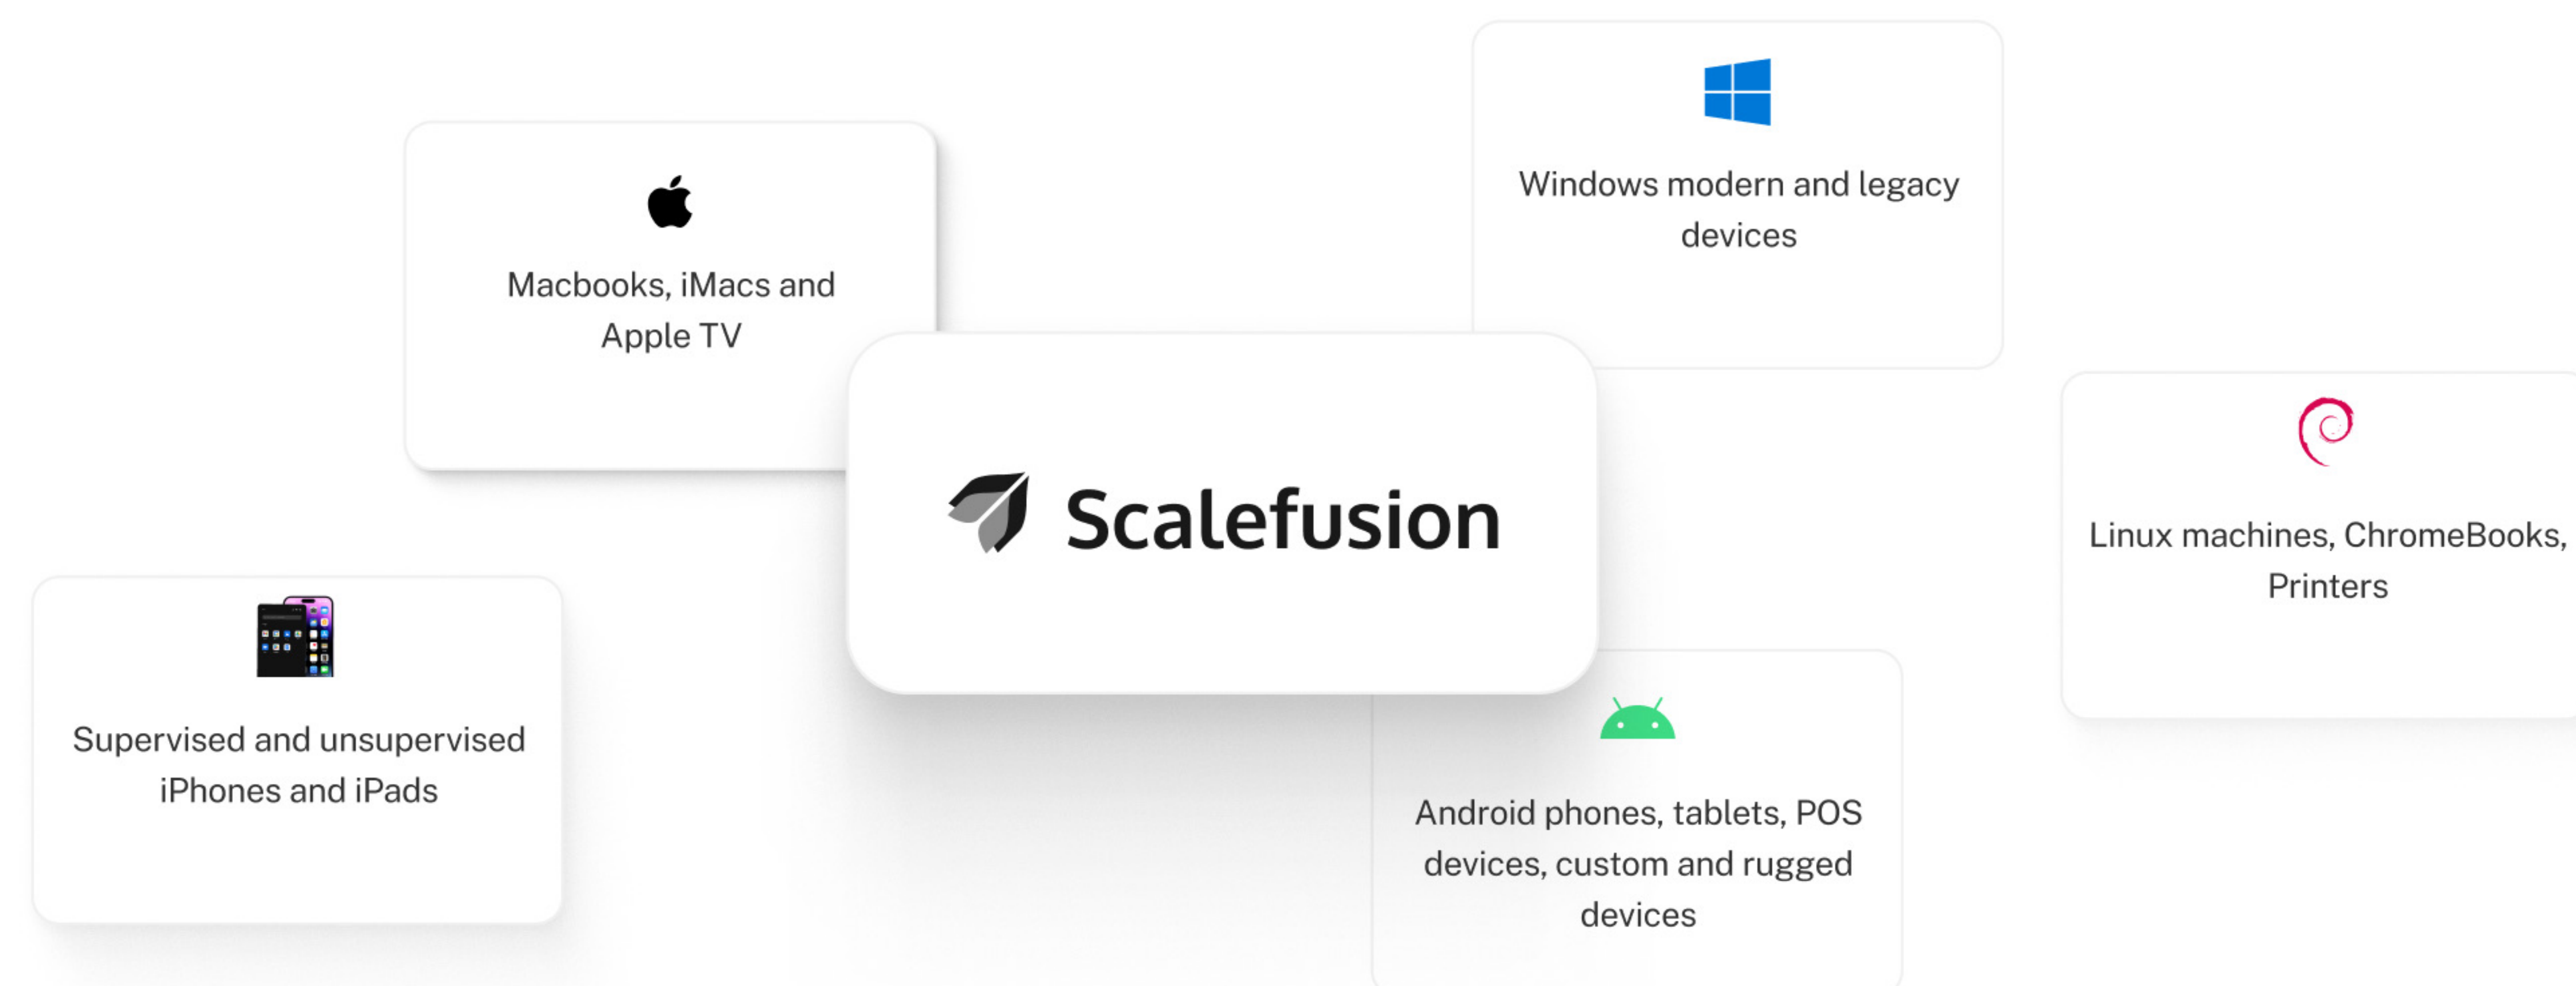

Device diversity or device dilemma: *The choice is yours*

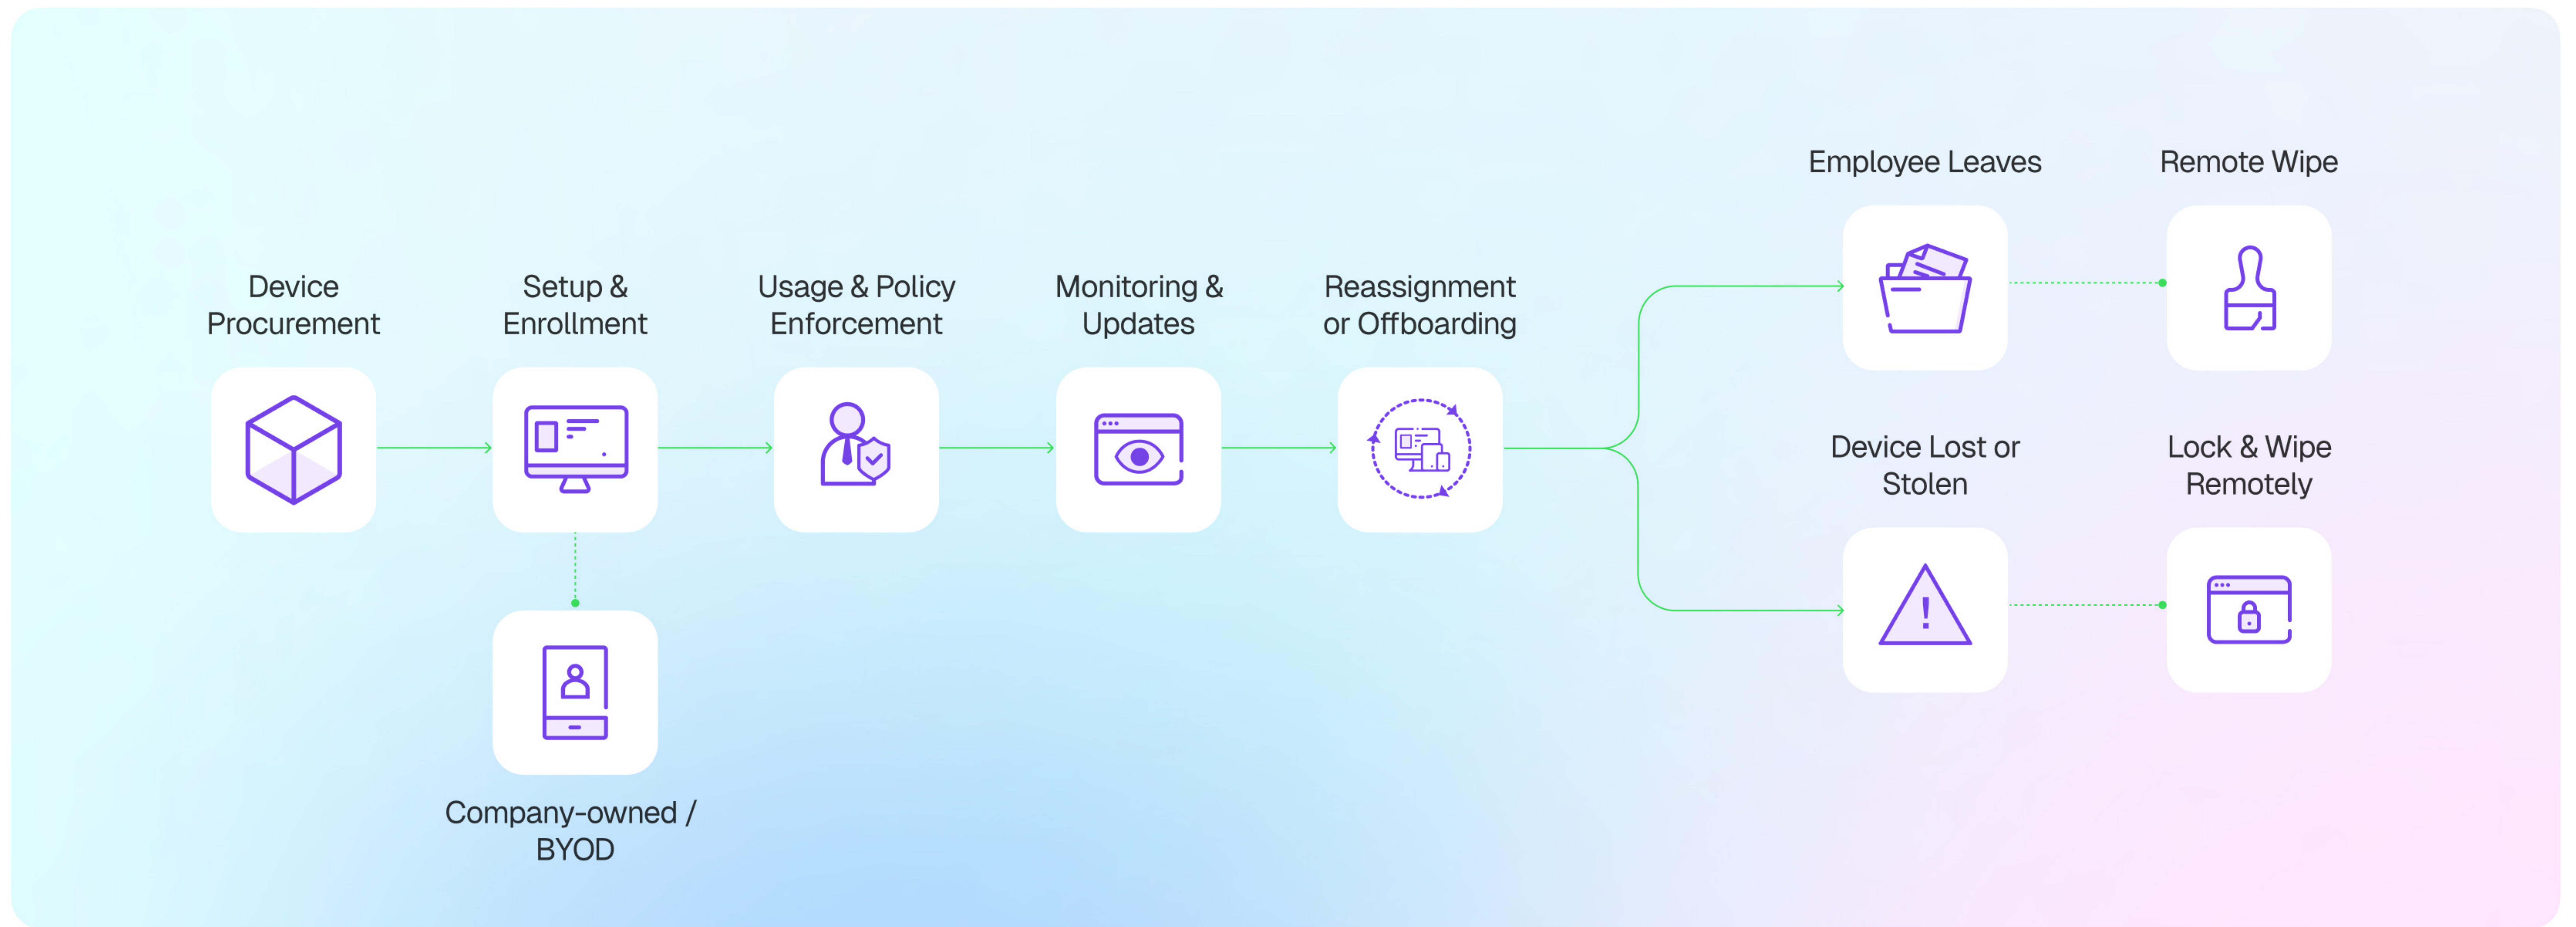

Enterprises today are juggling a growing assortment of devices, from corporate-owned laptops to BYOD smartphones, tablets, and other endpoints. Managing this complexity often feels like a balancing act on a tightrope. But it doesn't have to be.

Scalefusion understands IT. From configuration drift that slows down not just IT but overall enterprise processes to compliance conundrum that impacts the standing of your business, Scalefusion simplifies it all with a unified approach to device management. We help you eliminate inefficiencies, maintain consistent configurations, and ensure your devices stay compliant—without compromising on productivity or security. So that IT runs smoother, risks are minimized, and your enterprise is always a step ahead.

With Scalefusion, you can simplify enterprise mobility while embracing the full spectrum of devices your employees rely on. Unified policies, app provisioning, and intelligent management ensure every device gets exactly what it needs—without a glitch.

Managing multiple tools is no longer necessary with Scalefusion's One Agent, which provides a single console to handle everything seamlessly. Unlike others that stop where vendor support ends, we've got you covered—even for devices running on OS versions left behind. With seamless interoperability and comprehensive management, Scalefusion simplifies the chaos others in the market can't handle.

Tackling configuration drift throughout *device lifecycle*

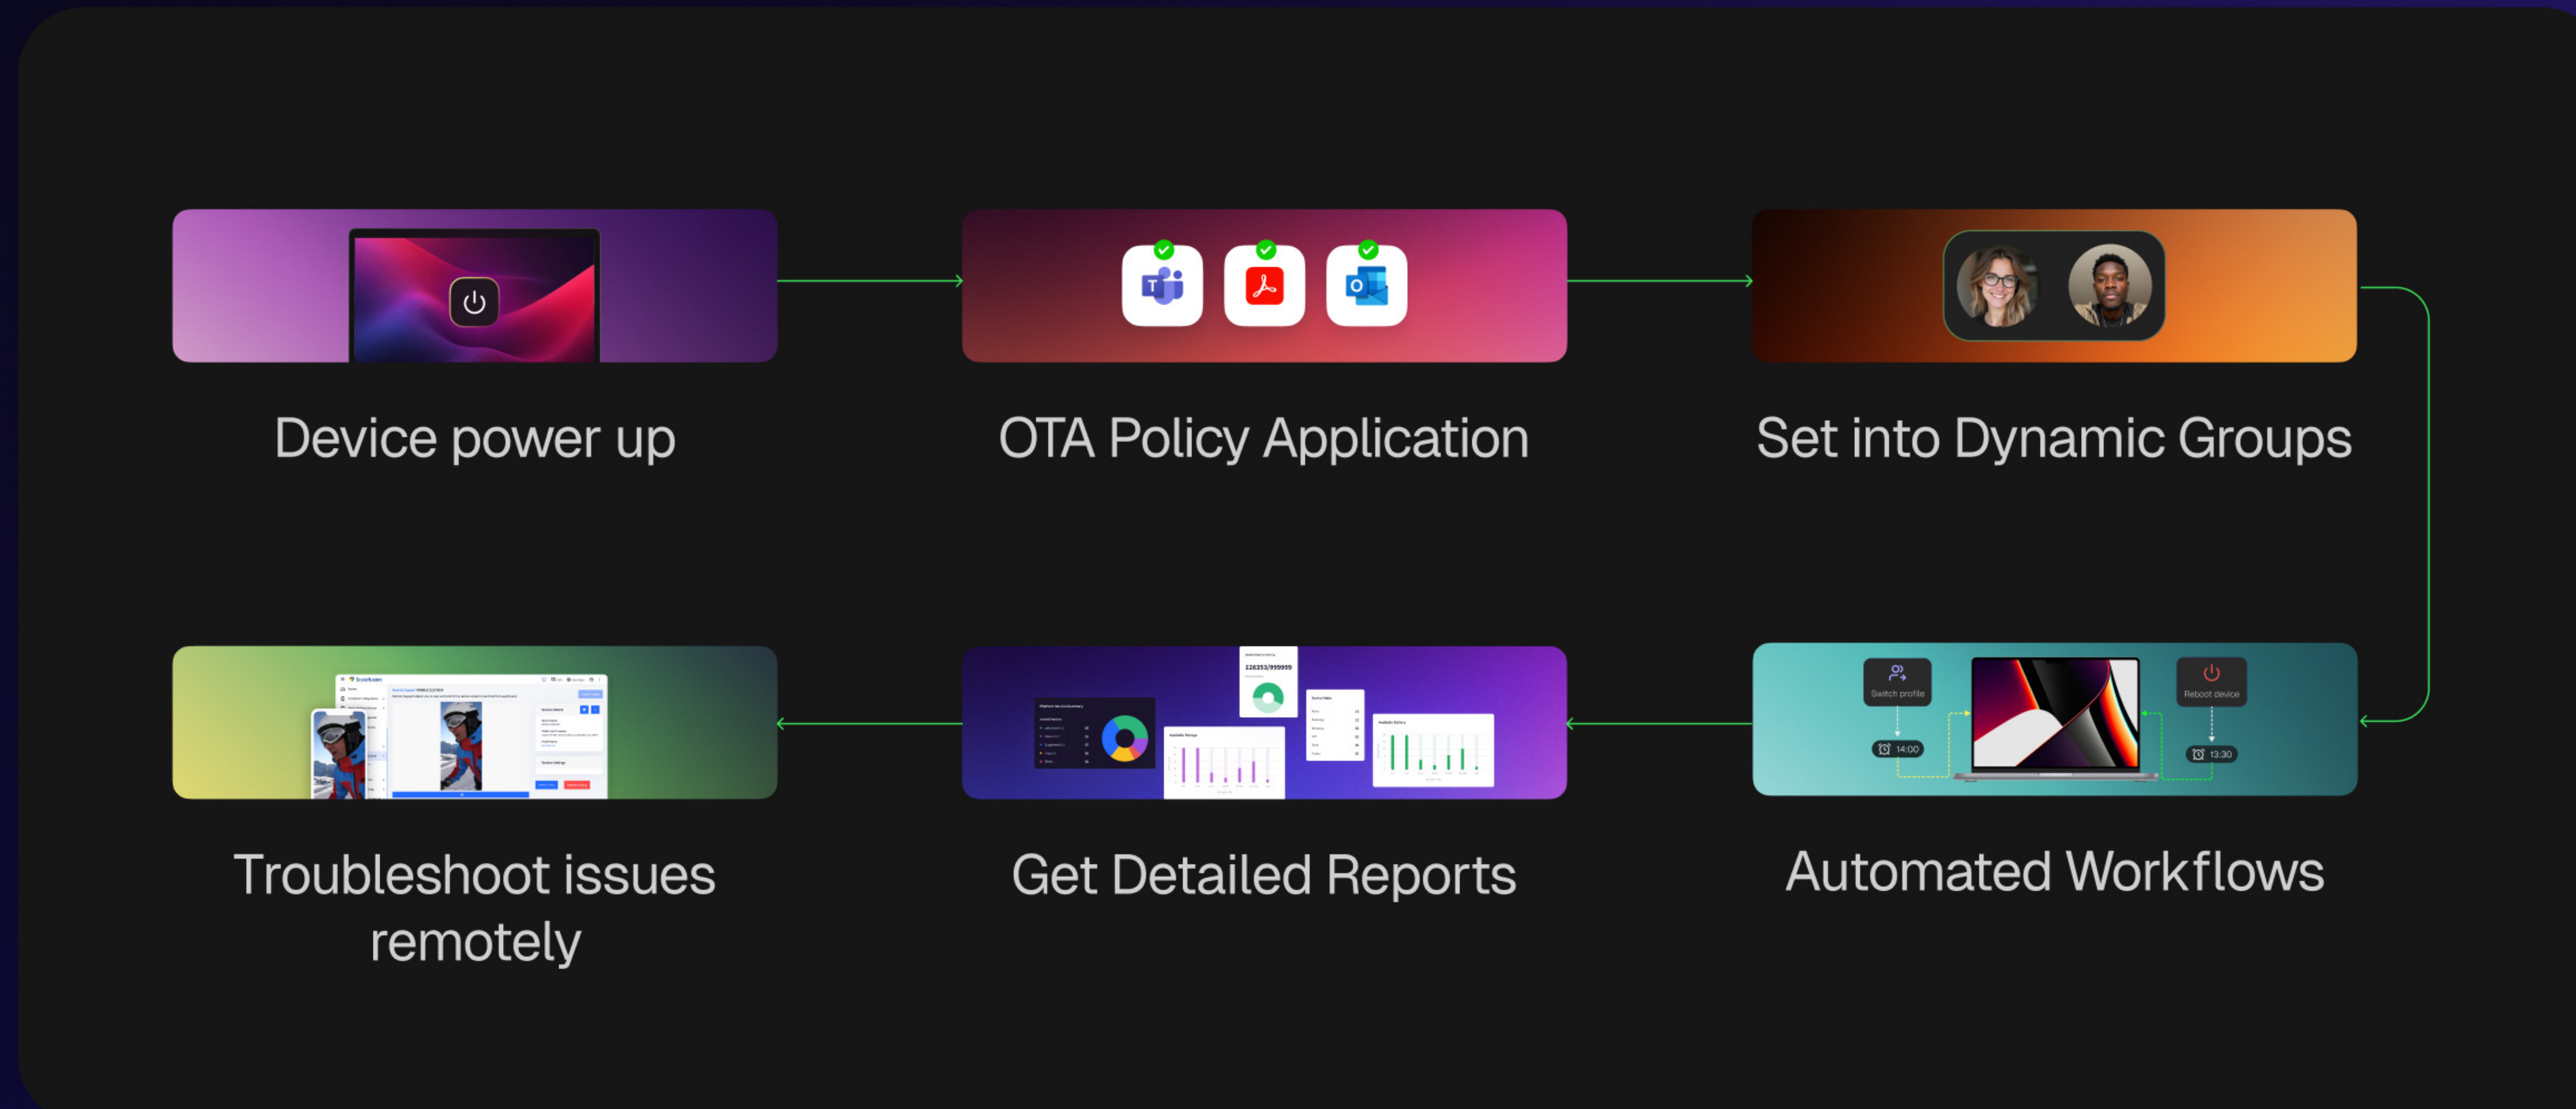

Configuration drift is one of the sneakiest culprits that slow down IT and disrupt business operations. As devices evolve through updates, patches, and new app installations, the consistency you once had can quickly unravel. Scalefusion puts an end to this by ensuring that your device configurations stay locked in. From the moment a device is enrolled to its eventual retirement, Scalefusion ensures a smooth, consistent lifecycle. Policies are enforced automatically, updates are rolled out seamlessly, and every device remains in sync with your enterprise standards, so you can focus on what matters—growing your business without the worry of unexpected disruptions.

Maximizing IT efficiency:

Smarter management, less hassle

IT teams are constantly juggling priorities, but with Scalefusion, you don't have to waste time on the little things. From the moment a device is powered up, security policies are enforced, and the device is set on the right path—no manual intervention required. Over-the-air policy application, dynamic groups, and automated workflows ensure that every device is always in compliance and aligned with your enterprise needs.

Real-time compliance alerts and detailed reporting give your team a clear snapshot of device status without the constant back-and-forth. Remote troubleshooting with integrated ITSM and context-aware ticketing means device downtimes are drastically reduced, without ever hindering operations. It's all designed to save IT time and energy, so they can focus on driving value for your business—not chasing down issues.

1

Manage

- Device inventory
- Laptops
- Desktops
- Phones
- iPads & tablets
- Digital Signage
- POS
- Rugged & custom devices
- Printers
- Apps & OS versions

2

Deploy

- Policies
- Private and public apps
- Content & files
- Branding elements
- Approved users
- Email & exchange

3

Update

- OS versions
- Software patches
- Apps

4

Secure

- Devices
- Data
- Users
- Browsers
- Emails

A fresh take: a unified approach to endpoint management

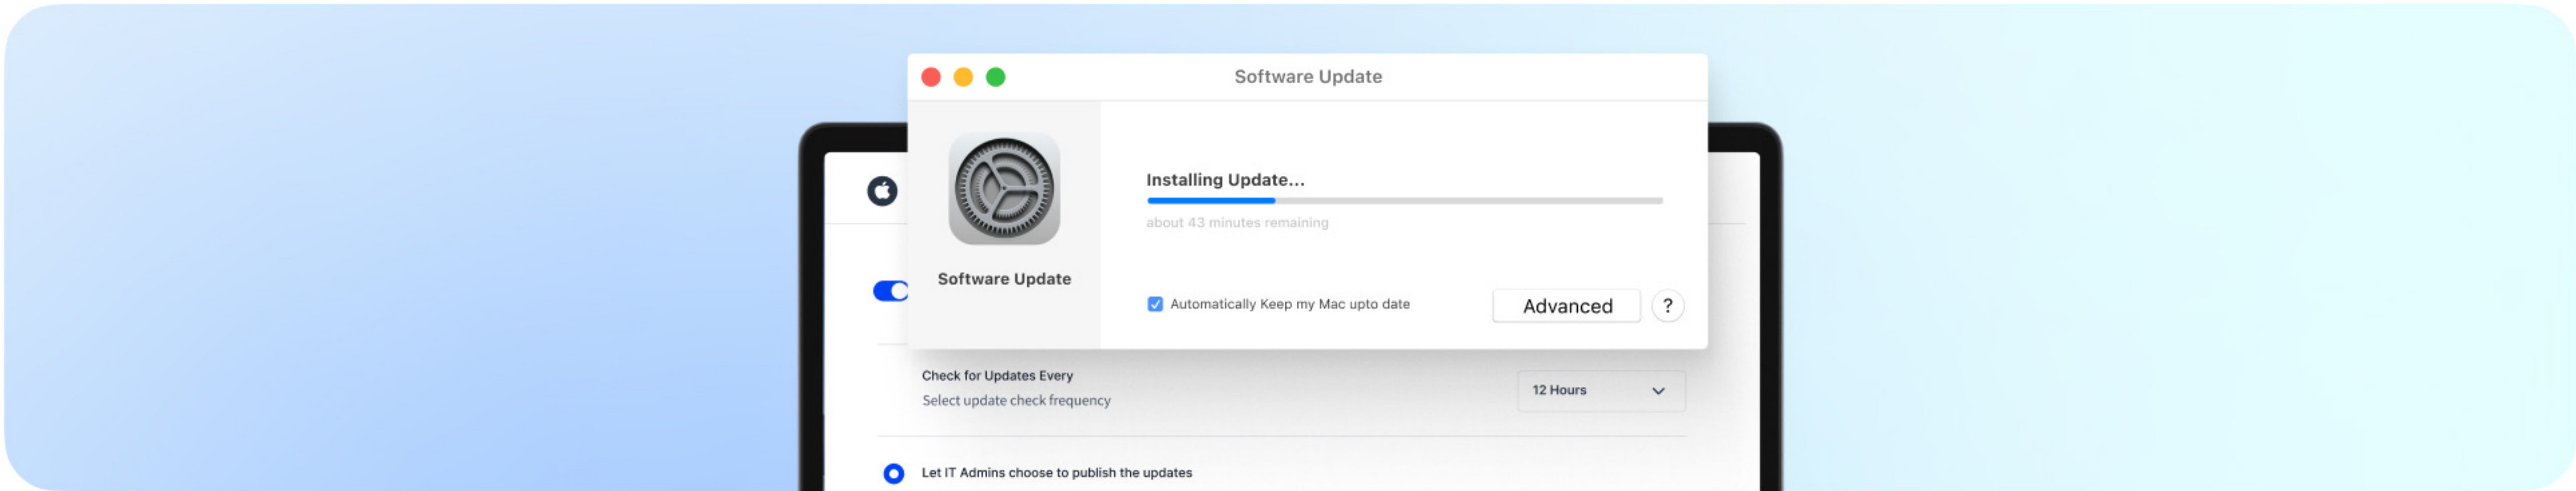

While other solutions offer fragmented tools, Scalefusion integrates everything from security policy enforcement to device monitoring in one seamless experience. It's not just about managing devices—it's about simplifying IT operations and enhancing productivity, all while maintaining control over the growing complexity of enterprise mobility.

Effortless OS patching

Simplify updates, eliminate vulnerabilities, and elevate performance—one patch at a time. Proactive OS updates and patch management, built for modern IT needs.

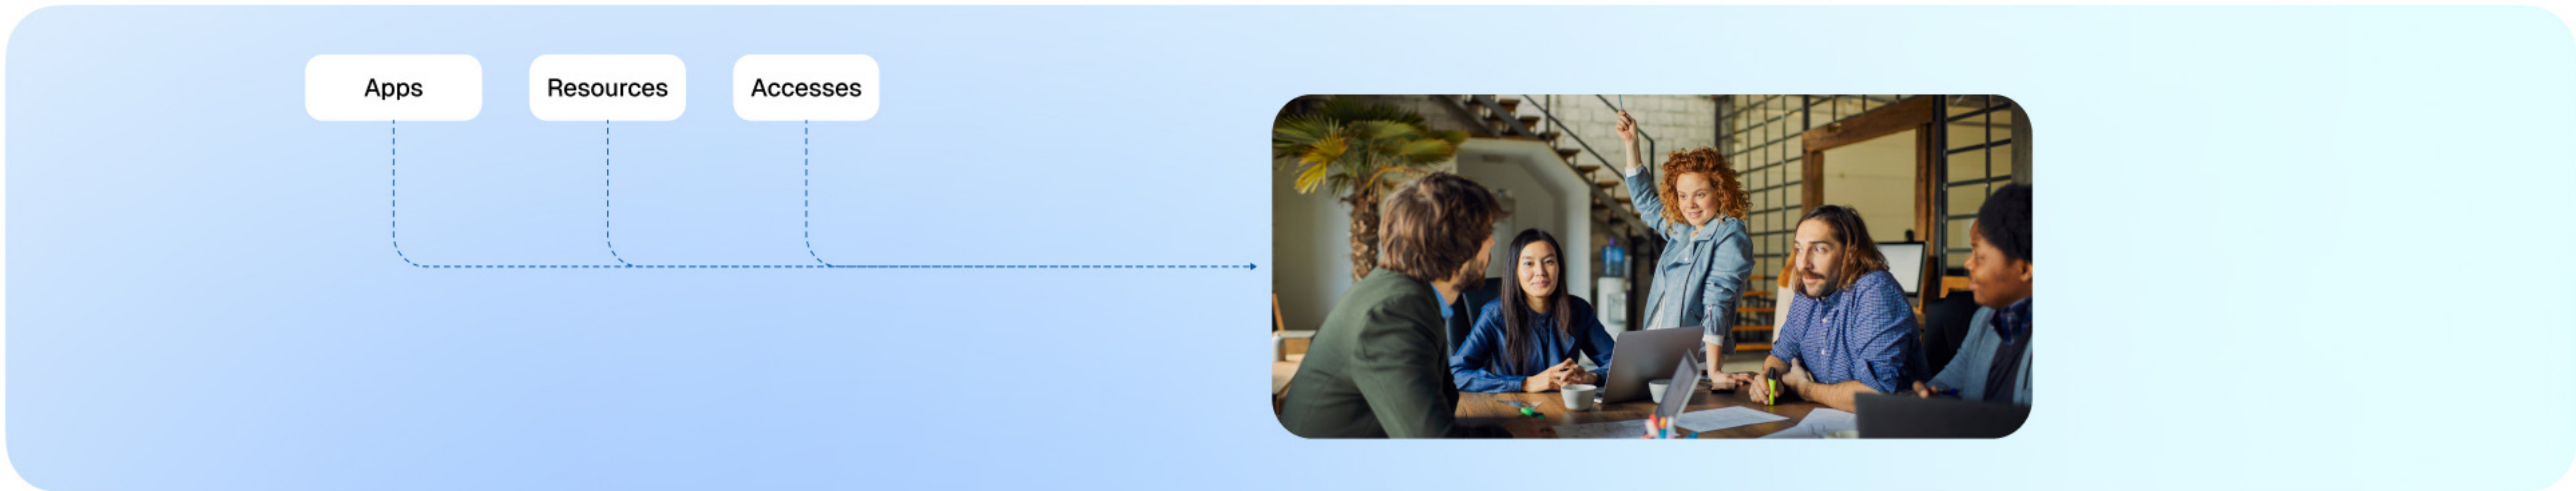

Keeping your devices up to date shouldn't be a hassle. With Scalefusion, OS patching is automated and streamlined, ensuring your devices are always running the latest security updates. Say goodbye to the stress of manual patching, and let Scalefusion handle the rollout across all your devices—without disrupting productivity. Whether it's critical security patches or routine updates, our solution ensures your devices stay compliant, secure, and ready for anything.

Custom policy enforcement

Customize policies, streamline control, and align devices with business needs—effortless, flexible, and secure.

Custom policies designed to meet your unique needs—because no two businesses are the same. With Scalefusion, you can dynamically apply custom settings using shell scripting, creating policies that work for your use case and improving efficiency across the board. Watch as IT hours multiply and your management gets smarter.

Airthink AI

AirThink AI, powered by OpenAI's GPT, revolutionizes automation by generating scripts tailored to your needs.

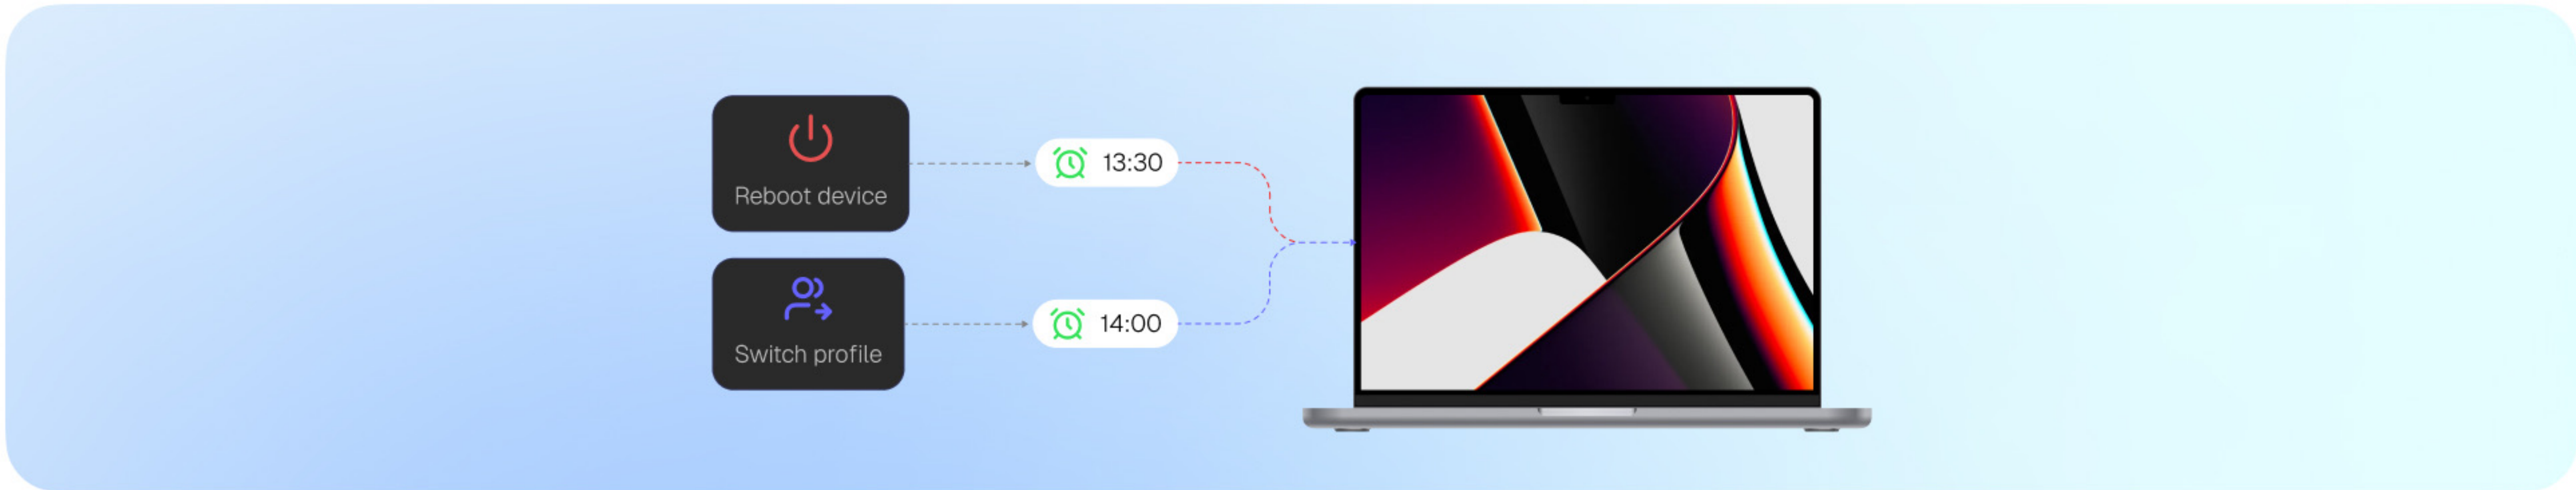

Leverage the industry's first GPT-powered AI tool for UEM—AirThink AI. Automate script creation, reduce manual errors, and eliminate the guesswork. AirThink AI makes it easier than ever to manage your devices, freeing up IT time and effort for strategic tasks.

Workflows and Reports

Workflows streamline actions and enforce policies, while Reports provide deep insights for compliance, device health, and smarter decision-making.

Automate IT tasks and workflows with ease. Set compliance alerts, schedule tasks, and choose execution times—all without the need for complex coding or scripting. Whether you're automating updates or managing device configurations, Scalefusion's workflows put IT on autopilot, letting you focus on what matters most.

Why stop at endpoint management?

With Scalefusion, endpoint management is just the beginning. Through OnelidP, you enforce Zero Trust access by continuously verifying user identity before granting access to corporate devices and apps. This ensures that only trusted users and devices can interact with your sensitive data.

Scalefusion's Veltar enhances endpoint security by providing web content filtering, VPN tunneling and I/O device control. Together, OnelidP and Veltar create a comprehensive security ecosystem that reduces risk and strengthens your enterprise's overall security posture.

Power up your IT operations with *Unified Endpoint Management*.
